"We kept it warm, but at a cost, and looked at how we could increase the thermal efficiency. Insulating the internal walls was intrusive and messy, although we tried it in one of the rooms with little effect. The obvious answer was External Wall Insulation, EWI."

"Having researched the specifications and manufacturers we chose the system supplied by Wetherby and contacted them for their recommendations on who could install it. They gave us the names of local installers and having met with Pioneer's Andrei Tartzu we felt confident that we had the right combination. Pioneer's experience and knowledge of the EWI system convinced us we had the solution to cold and damp walls."

"Pioneer's experience and knowledge of the EWI system convinced us we had the solution to cold and damp walls"

A SATISFIED customer comments: "Having bought a home, we set about making it 'ours' internally."

"The outside looked appealing but was in need of some attention so we set about painting it in sections and at the same time got a quote to strip the rendering and renew it."

"The cost was a problem so we patched it up knowing we would have to 'bite the bullet' one day, but at the back of our mind was the fact that the house did not have the benefit of cavity wall insulation."
